PwC Modern Data Platform Assessment

Have you got what it takes?

The Challenge

Cloud adoption and modern data platforms fundamentally shift how your company delivers value to customers from every part of the organisation, and a comprehensive data platform is critical to sustaining and optimising the change and realising the cloud's full potential:

Workforce Ready

How are you preparing your workforce for the adoption of modern data technologies?

Skills

How can we upskill the workforce internally and through partners to be future ready?

Impact

Data strategy impact on governance, financial processes & operations.

Prepare

How can prepare my organisation to better take advantage of data & AI technologies?

Metrics

What data should IT use to tie operational and financial goals together?

Return on Investment

What is the ROI for investing in a more modern data platform?

Embed Automation

How can I embed automation capabilities to make this shift more efficient?

The solution

PwC Data Platform Assessment: Build your Foundation to Realise Value from Data at Scale **in 4-6 weeks.**

Understand how to modernise and future-proof your people, processes, data & technology for the Cloud

Data Platforms, Technology & Engineering Guidance

Discover how using a fabric for data governed and operated in a mesh operating model delivers value driving pipelines of trusted, high quality data in secure and scalable hybrid cloud environments.

Management, Governance & Quality Direction

Design enterprise and application specific data marketplaces that securely democratise access and utilisation with efficiency at scale.

### Data Strategy & Operating Model Discovery

Define long-term data strategy for maximising value from data. Identify the right people, skills, behaviours & culture. Identify and implement opportunities to monetise your organisations data.

Assessment Overview

A time-boxed 20 day discovery exercise fed by a series of workshops, interviews and documentation reviews to enable the delivery of a modern data platform.

Assessment Deliverables

- Scope & Requirements document
- High level design document
- Logical architecture document
- High level plan for delivery
- Estimates for budgetary and planning purposes

One common platform should enable data services to all your users

Key benefits

Supercharge your AI Journey

Modern data platforms maximise the transformative potential of AI at scale with flexibility, agility and optimisation of enabling technologies versus needs.

01

Futureproof your Data Capability

Effective data strategy, teams & cultures maximise data value to enable scaling, resilience and security with velocity and agility.

02

Optimise your Costs

Reduce wasted costs in data & unlock organisational efficiencies from data-enabled use cases to drive cost savings and unlock revenue growth.

03

E2E Digital Transformation: We enabled the Global CIO to design and shape their E2E digital transformation programme in under 6 months

Challenge

The client's brands operated as federated, individual business units within countries, with little standardisation across the organisation.

A target to create a single operating model, supported by new IT systems and transformed processes across the global business was set.

A digital transformation of front and back-office functions was required alongside the operating model transformation of IT services in support of the transformed global business.

Solution

PwC were asked to provide direct delivery support for three core transformation programmes - Finance, Customer Experience & Data-Led decisions - as well as providing consulting and guidance on strategies for integration, DevOps and managing large-scale IT transformation.

The solution, working with the Global CIO, brought our expertise in architecture, technology delivery and programme management, along with knowledge and experience of large-scale transformation, to create a logical and workable solution delivering rapid time to value - while identifying and managing delivery risk.

Results

We delivered an integrated global roadmap across six transformation programmes, five countries and countless stakeholders in less than 6 months.

The CIO commented that we had "done the near impossible; you've brought together the leadership teams of five countries and six transformation programmes from a standing start and got them committed to a single plan for the future."

Identified ~17% OPEX cost reduction driven by channel volume shift, simplification and network transformation.
