SAP S/4 'Show Home' Launchpad on AWS

PwC's SAP Cloud Centre of Excellence

Validate your cloud and SAP S/4 business case with a fully functional 'Show Home' accessible in **under 48 hours.**

The SAP S/4 challenge

SAP customers and analyst feedback consistently shows the majority of SAP centric organisations face the same quandaries…

- Committing to a **£m+ S/4 transformation programmes** before validating the functional business case is a non-starter.

- **An empty S/4 instance doesn't help.** A working company model that can show working processes, reporting & persona based UIs with examples of your own data sets.

- Access to a prototyping system for Business Process Owners to analyse S/4 functional benefits using **real company data** is needed to validate the business case.

- Many have concerns about cloud performance, security, interfacing & connectivity which **must be tested to mitigated.**

- SAP build times are taking too long with many providers, rapid access to a **prototype system in days** is required to ensure project teams keep momentum.

- Many organisations **don't have the skills** yet to create a private, secure, monitored & usable S/4 prototype system.

- Desire for an asset that can be extended for **production use** for SAP or any other application or native cloud workload.

Our approach:

PwC's AWS Launchpad provides the platform and mechanism for enterprises to answer the complete business case spectrum from Landing Zones, Cloud Automation, and operations to functional process validation, persona UIs, and tax-efficient company operations.

- **Business:** A fully operational reference company including Personal UIs based on functional user roles, tax efficient models, Industry templates, and example business data. (with the option of leveraging your own)

- **Technical:** Rapid Landing Zone deployment + Native AWS automation for SAP with the ability to extend into native cloud services such as AWS Data Lakes.

- **Integration:** Multi-cloud enabled integration to common platforms such as Concur, Successfactors, Ariba, SAP BTP and Supply chain integration.

>50% of SAP organisations are still looking to validate their business case for SAP S/4 Transformation in tandem with a migration to Cloud to reduce operating costs & increase speed to innovation & automation.
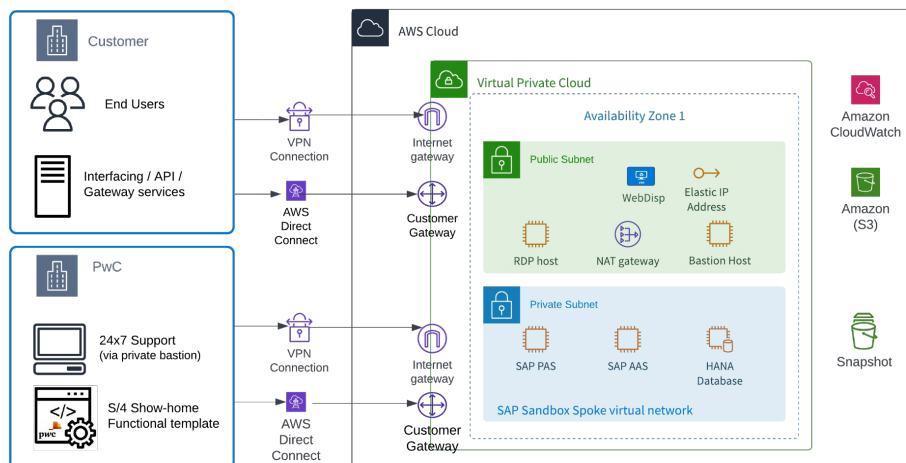

Out the box:

- AWS SAP specific LZ deployment
- Security Framework (Network, OS & Cloud)
- Site 2 Site connectivity options
- Media Storage
- SAP Backup Management
- PwC Cloud Automation orchestration leveraging Hyperscaler native tooling
- BYOL license or leverage Demo & Test PwC license.
- Automated S/4 deployment.
- PwC 'Show Home' S/4 template deployment ready for S/4 transformation validation

Our Industry **"Show Home"** enables to engage your teams on what the future will look like using SAP S/4 HANA and connected technologies. We will leverage **PwC's Industry Templates** to accelerate the early build of the solution including process, personas, data and systems standards.

Lay the foundations
Built with PwC Industry and SAP S/4 HANA solution best practices.

Turn on the lights
Connect the solution to your data.

Personalise
Explore the future to make key design decisions.

Bring your business case to life
Immerse your people in the experience.

The benefits for your organisation

- Clarity on where simplification and standardisation for your company processes.

- Richer conversations on scope, data and design choices using your company data.

- Driving your S/4 system early to validate your business case early, a real vs paper based validation.

- Run as a fully PwC supported deployment to "self supported" you define the RACI you need.

- Rapid deployment of an Enterprise scalable AWS Landing Zone, nothing is disposable.

- Execute within your existing AWS account, PwC account or within a new AWS account.

- Secure out the box – our Landing Zone, OS and SAP images are built to NIST standards as standard.

- See the system early – reduces risk from waiting until later.
